

# Abzorber<sup>TM</sup>

## Root Dip

### *Moisture Retention and Delivery System*

#### **Use for all new Plantings of Bare Rooted Vines and Trees**

Abzorber is a starch based super absorbent polymer granule. Mixed with water it forms a hydrogel to use as a root dip for all bare rooted new plantings. Dipped, coated roots absorb, hold and release moisture to the roots as required.

Abzorber treated roots create a great micro-environment for any added bio-inoculants such as Trichoderma or Mycorrhizal fungi to flourish. Any nutrients added are also held and released to developing roots. Abzorber is bio-degradable, ultimately becoming a food source for the beneficial fungi in the soils.

#### **Directions for Use:**

Use 4-8g per litre of clean water. Agitate vigorously and slowly add the product. Allow hydrogel to fully hydrate before adding other nutrients.

Dip plant root structure ensuring good coverage. Lift and allow excess to drain before planting. Adjust root dip texture by adding more water or **Abzorber**.

#### **Suggested Applications:**

Incorporate Bio-Inoculants such as Trichoderma and Mycorrhizal fungi.

Ensure Abzorber Root Dip is fully hydrated before adding nutrients.

Mix all nutrients together prior to adding to root dip.

**Grapevines and Apples:** Use Unite WP at a rate of 6g per litre of root dip.

**Kiwifruit:** Use Kiwivax as part of your root dip. Rate is 1-2g per litre of root dip.

**Net Contents: 1kg**
