

PlantMate™ Lettuce

Rootzone drench

Triple-Bioactivity Trichoderma

PlantMate Lettuce boosts transplants by energising healthy growth for maximum yield* and quality.

Bioactivity boosts marketable yield

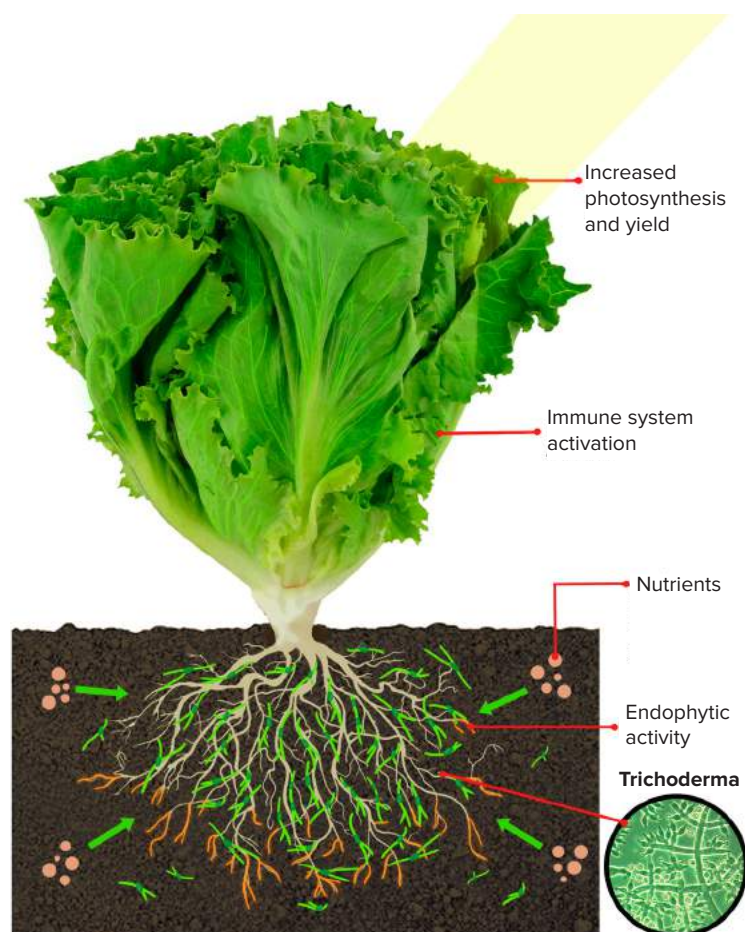

- **Rhizosphere Trichoderma** colonise rootzone
- Establish a living barrier around roots
- Trichoderma is parasitic to pathogenic microbes

Bioactivity drives plant establishment

- **Endophytic Trichoderma** penetrate roots
- Increase the plant's photosynthetic capability
- Activate the seedling's immune system

Bioactivity balances soil

- **Saprophytic Trichoderma** consume plant debris
- Increase humus and plant available nutrients
- Lock up carbon and improve water holding capacity

PlantMate Lettuce increases root growth for improved quality and yield.

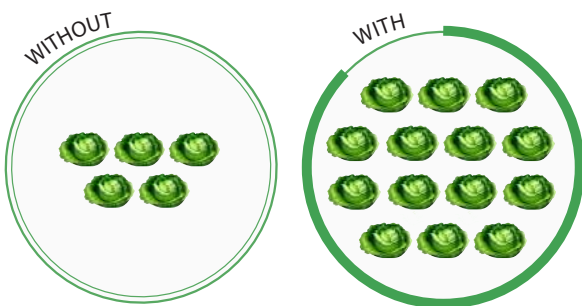

Pic: LeaderBrand, Canterbury, New Zealand

Each seedling plug drenched with 4 million spores that quickly colonise the plant roots, the rootzone and the wider soil environment to establish a living protective barrier.

Field trial

Field lettuces treated prior to planting saw an 84% increase in marketable lettuce at harvest.

Directions for use

Mix 200 grams PlantMate Lettuce with 50 litres of clean water and drench seedling plugs prior to field planting.

200 grams will treat 25,000 plugs so ensure media is moist prior to application.

Safety

Non-toxic to humans, animals, wildlife and the environment. No withholding periods.

Compatibility

PlantMate Lettuce is compatible with most fungicides applied after plant establishment.

Packaging

PlantMate Lettuce is available as a 200 gram pack. Optimum storage conditions: 4°C. DO NOT FREEZE. Store in a cool place.

Distribution within Australia is exclusive to:

E.E. Muir & Sons
